

**ALPHAREN Integrator (ARINT) System**

(c) 2021 RENware Software Systems. *RESTRICTED* only for project internal use

# Development Overview

Product 0000-0156 0.0 to current version

- 210728 me new doc
- 

## Preliminaries

Development process over ARSRV implies basically the following components:

- **SRV** - service
- **CHN** - channel

Fundamentally and very high level, a service (SRV) use a channel (CHN) to communicate with external environment.

---

## CHN - channel

A channel must be defined in **ARSRV** management interface before use.

The CHN establish:

- an own name which uniquely identifies it
  - the endpoint address
  - the protocol used
  - data formats in messages exchanged thru the channel
  - auth and other security parameters
- 

## SRV - service

A service must be written in Python then deployed to **ARSRV** in order to be used.

A service has the following high level flow:

- defines a handler in order to be accessed by ARSRV

- obtain any required parameters in order to properly do its job
  - connects to a channel to read required input
  - make the necessary transformation over obtained data
  - connects to a channel to write computed output
  - log any process details for future references and errors debugging
- 

## File names

Development documents (except the current one) will be named as follows:

- **06.DEV** as prefix
  - *optional* a code which specify (only if is case) at which subcomponent or protocol, and so on
  - name of the document
- 

## Services names

The producer reserve a name space for its services (as built in AR Integrator or as future updates) starting with characters **AR**.

The users are free to name how they wants their own developed services, but not start with AR characters. Respecting this rule will allow producer future updates to overwrite *client own developed services*.

This rule should apply as general validity for any components names, for example channel names.

*Anyway the customer must be aware that names starting with **AR** characters are reserved and are subject of future changes without any notice or change log.*
