WORK IN PROGRESS...

System objects catalog

Here are listed the main *area of objects* defined in *System database*. These are the equivalent of a `namespace` (or `schema` in relational databases terminology) and they will become in a way¹ a `prefix` for all entities / objects contained in.

Namespaces

- **URRM** user roles and rights management
- **ODEF** business objects definition
- **MADA** global master data (cross any systems, applications, nodes, ie global for an **ARINT instance**)
- -#TODO...

Namespace URRM

-#TODO...

Namespace ODEF

-#TODO...

Notes and remarks

-
1. (PROPOSAL @ 230823 by piu): The way that concrete entities / objects are prefixed depends of database, ORM instrument used, etc. To keep as agnostic as possible this prefix will be used as *object name prefix* followed by `_` character. **All code-names for a prefix will be kept in 4 characters.** [↩](#)
